April 22, 2015

Estimated BTS

I am writing this letter to express my desire to work and innovate for you, for the world.

Since 8 years I've only been programming in C++, Java for school projects, so i have good skill for solve problems with algorithmic logic, i thought that would be ideal for me but something was missing, the beauty. When i started to be a web developer in 2010 i found the missing piece , could do almost anything with attractive interfaces and good performance. The last years of my study at university dedicated myself to show at the students that programming was not only easy also is wonderful too.

I started a project called skoolfre,for now it's just paper but i want to one day become a reality. For this i have much to learn. Luckily i like learning. I have a dream, help to build a free university online with a concept like duolingo.

I recently had a contract work for the company Gigantes Agroindustria where i collaborate develop some applications they needed to improve administrative parts for the company.This contract end. I have a good feeling knowing that my time in the company improved them software and me like a person.

Today I knock your door for a chance to grow and realize my dream of work in a software development company. I hope in my heart that you will open doors for me and give me the opportunity to do my best work with all my effort just for you.

var msg = new SpeechSynthesisUtterance('Thank you for your attention. I sincerely hope give me a chance to work with all my strength for you.');
msg.lang="en-US"
window.speechSynthesis.speak(msg);
