## SAMPLE EXAM

Please show **all** your work! Answers without supporting work will not be given credit. Write answers in spaces provided. You have 1 hour and 50 minutes to complete this exam.

Name:\_

1. Calculate the following limits. If a limit is  $\infty$  or  $-\infty$ , please say so. Make sure you show all your work and justify all your answers.

(a) 
$$\lim_{x \to 3} \frac{\sqrt{x+1}-2}{x-3}$$

Answer:\_\_\_\_\_

(b) 
$$\lim_{x \to 0} \frac{\sin(4x)}{8x}$$

Answer:\_\_\_\_\_

2. Use the  $\varepsilon$ - $\delta$  definition of limit to prove that

$$\lim_{x \to 2} x^2 - 3x + 2 = 0$$

3. If  $h(x) = \sqrt{x^2 + 2} - 1$ , find a **non-trivial** decomposition of h into f and g such that  $h = f \circ g$ .

4. Find the first two derivatives of the function  $f(x) = x^2 \cos(x)$ . Simplify your answers as much as possible. Show all your work.

$$f'(x) = \underline{\qquad}$$

5. Find the derivative of the function  $f(x) = \int_{x^2}^2 \frac{\cos(t)}{t} dt$ .

Answer:\_\_\_\_\_

6. Set up, but do not evaluate, the integral for the volume of the solid obtained by rotating the area between the curves y = x and  $y = \sqrt{x}$  about the x-axis.
