

TITLE OF THE THESIS

by

ALEJANDRO VIGNA-GÓMEZ

&

JAMES WILLIAM BARRETT

A thesis submitted to the University of Birmingham for the degree of
DOCTOR OF PHILOSOPHY

Institute for Gravitational Wave Astronomy

School of Physics and Astronomy

College of Engineering and Physical Sciences

University of Birmingham

Date

Abstract

This thesis vastly improved the knowledge of humanity, while revolutionising several fields in the meantime.

Dedication

To Alejandro Vigna-Gómez and James William Makepeace Barrett III.

Acknowledgements

“Cheesy quote.”

Funding for my studies was provided by the University of Birmingham.

Chapter 1

Introduction

For a circular orbit, we can equate the centripetal force $F_{c,i} = m_i r_i \dot{\theta}^2$ to the gravitational force $F_g = Gm_1 m_2 / r^2$, and solve for $\dot{\theta}^2$ in order to derive Kepler's Third Law in the form

$$\dot{\theta}^2 = \frac{GM}{r^3}. \quad (1.1)$$

Equation 1.1 is Kepler's Third Law.

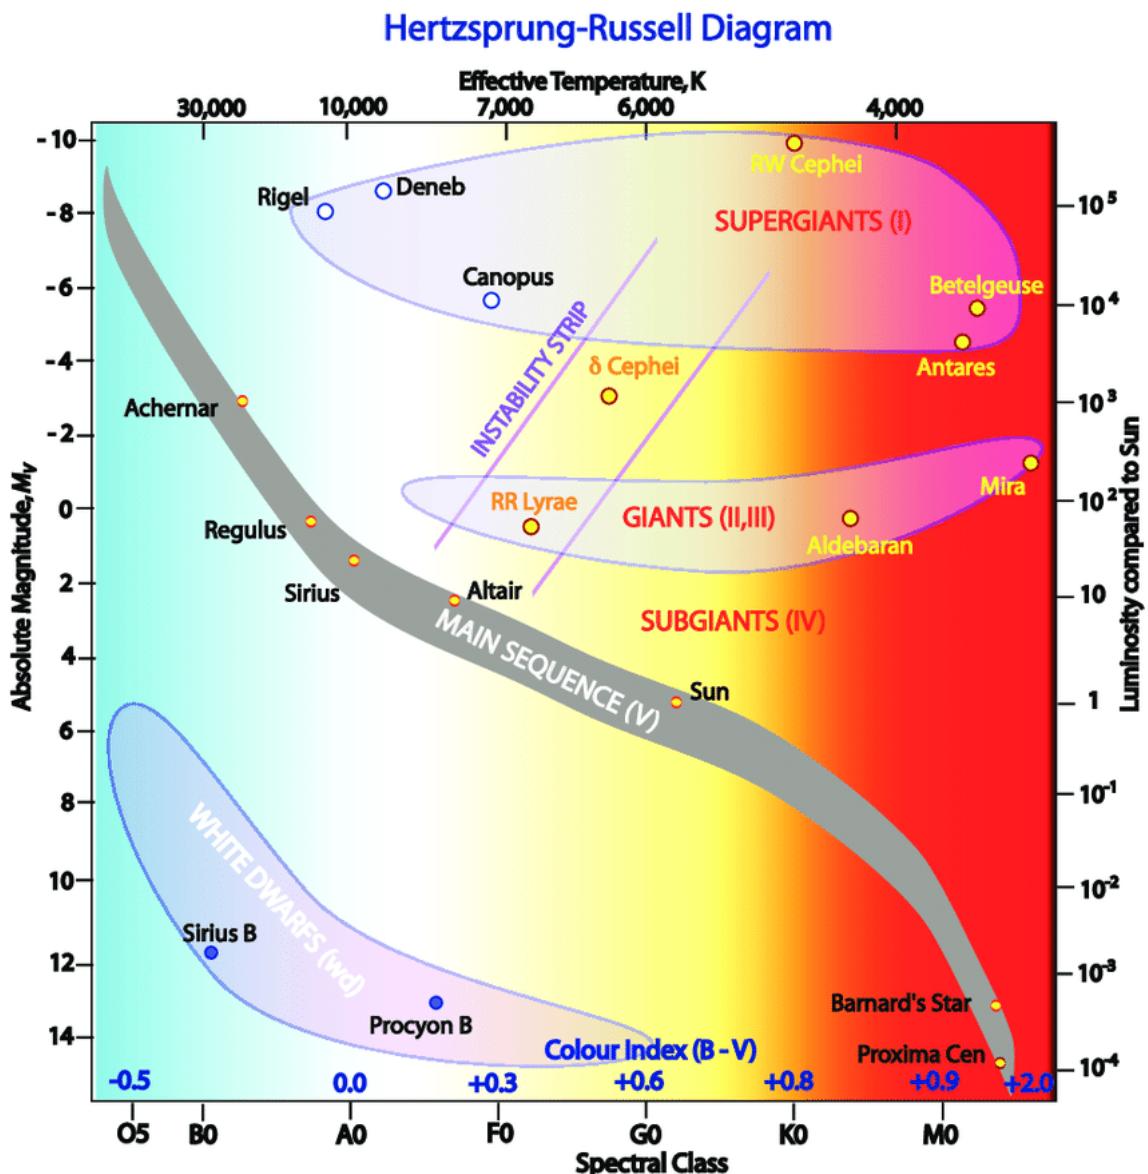

Figure 1.1: Hertzsprung-Russell (HR) diagram as shown in figure 1 of (author?) [1].

Chapter 2

Paper I

2.1 Introduction

Section. Introduction of the topic of interest.

2.1.1 Population Synthesis

Subsection.

Rapid Population Synthesis

Subsubsection.

Table 2.1: “Measured parameters of the Galactic double neutron stars (DNSs) used as a diagnosis in this study. ... References: ^a(**author?**) [2].” Table extract as presented in (**author?**) 3

Pulsar	P	e	M_{plsr}	M_{cmpn}	Ref
	[days]		[M_{\odot}]	[M_{\odot}]	
J0453 + 1559	4.072	0.113	1.559	1.174	a

Chapter 3

Conclusions

In this work we have unified physics.

Appendix A

First Appendix

Things that didn't make it to the main text.
